For Immediate Release

WIPP Instructors to Provide Specialized Training For Indiana Emergency Response Professionals

CARLSBAD, N.M., January 25, 2001 – Trainers from the U.S. Department of Energy's (DOE) Waste Isolation Pilot Plant (WIPP) will be in Indianapolis, Indiana, January 29-30 and February 1-2 to teach emergency response professionals what to do should they arrive at an accident involving a WIPP shipment.

Transuranic radioactive waste shipments from DOE's Battelle Columbus Laboratories in Columbus, Ohio, are tentatively scheduled to begin in 2002. Trucks coming from Battelle Columbus Laboratories will follow Interstate 70 through Indiana en route to WIPP.

Instructors will teach these courses:

- *First Responder*, which provides emergency responders from state and local jurisdictions with the tools needed to protect themselves, the public and the environment in the unlikely event of a transportation accident involving a shipment headed for WIPP. First responders are individuals who arrive first at scenes of accidents. They include law enforcement personnel, emergency medical technicians, firefighters and tow truck operators.
- *Radiological Instrumentation Orientation*, which provides students instruction in the proper use, care and maintenance of radiation detection instruments. Use of radiological instrumentation is the only way to detect radiation in the unlikely event of release.

All classes will take place from 8 a.m.-4 p.m. (EST) at the Wayne Township Fire Department.

-More-

The courses are offered through DOE's States and Tribal Education Program (STEP) and taught by instructors from the Westinghouse Waste Isolation Division, the management and operating contractor for DOE at WIPP.

Students are instructed in material identification, regulations, response procedures and personal protection. As part of the training, students will also see, first hand, the truck and shipping containers (Transuranic Package Transporter, Model 2 or TRUPACT-II) that will be used for actual WIPP shipments.

Since the inception of STEP in 1988, DOE has trained more than 17,000 emergency response personnel in 20 states. In 1993, 1997 and 2000 the Occupational Safety and Health Administration reviewed and concurred with all STEP courses. STEP courses include Train-The-Trainer, First Responder, First Responder Refresher, Command and Control, Incident Command System and Radiological Instrumentation Orientation.

WIPP, a cornerstone of the DOE's cleanup effort, is designed to permanently dispose of defense-generated transuranic radioactive waste left from the research and production of nuclear weapons.

Located in southeastern New Mexico, 26 miles east of Carlsbad, project facilities include disposal rooms excavated in an ancient, stable salt formation 2,150 feet (almost one-half mile) underground. Waste disposal operations began at WIPP March 26, 1999.

Transuranic waste consists of clothing, tools, rags, debris and other disposable items contaminated with radioactive elements, mostly plutonium.

For more information about WIPP, call 1-800-336-9477, or visit the WIPP Web site at <http://www.wipp.carlsbad.nm.us>.
