**Security Walls-Triumph Technologies Team Awarded
WIPP Security Contract**

CARLSBAD, N.M., February 18, 2008 – Washington TRU Solutions LLC (WTS) announced today that it has awarded a subcontract valued at over \$18 million to Security Walls LLC of Knoxville, Tenn. Security Walls LLC teamed with Triumph Technologies, Inc. to provide security services to the U.S. Department of Energy's (DOE) Waste Isolation Pilot Plant (WIPP). The initial 12-month subcontract includes four one-year options.

“Security plays a key role at WIPP. I certainly want to congratulate Security Walls on this competitive award and we look forward to a smooth transition,” said Farok Sharif, WTS president and general manager. WTS manages and operates WIPP near Carlsbad for the Department of Energy.

Security Walls LLC was established in 2003 and is an 8(a)-certified small, disadvantaged, woman-owned business. The company has performed work for the Department of Homeland Security, Department of Health and Human Services, the Department of Defense, as well as the Department of Energy.

-More-

Triumph Technologies, Inc., headquartered in Falls Church, Va., is a service-disabled veteran, woman-owned corporation and specializes in program management, information technology and security services to government and private industry. Together, Security Walls and Triumph Technologies offer more than 25 years of experience in investigative and security services.

Four companies provided competitive proposals for the subcontract, including Santa Fe Protective Services, WIPP security provider since 2001. Security Walls expects to maintain current security staffing levels under the new contract.

WIPP is the world's first licensed repository for the permanent disposal of defense-generated transuranic radioactive waste left from research and production of nuclear weapons and a cornerstone to the DOE national clean-up effort.

Waste temporarily stored at sites around the country is shipped to WIPP and permanently disposed in rooms mined out of an ancient salt formation 2,150 feet below the surface. WIPP, which began waste disposal operations in 1999, is located 26 miles outside of Carlsbad, N.M.
