## 1. Introduction

Sections 2 through 7 of this report define the result of the 2012 leveling survey through the subsidence monuments at the WIPP site. Approximately 15 miles of leveling was completed through nine vertical control loops. The 2012 survey includes the determination of elevation on each of the 48 existing subsidence monuments and the WIPP baseline survey, and 14 of the National Geodetic Survey's (NGS) vertical control points. The field observations were completed during September through November 2012 by the Nuclear Waste Partnership (NWP) Mine Engineering Surveyors.

Digital leveling techniques were utilized to achieve better than Second Order Class II loop closures as outlined by the Federal Geodetic Control Subcommittee (FGCS). Because it is important to perform the subsidence survey in exactly the same manner each year, WIPP procedure (WP 09-ES4001) details each step of the survey. Starting with the 2002 survey, this procedure has been used to perform the subsidence survey.

Starting with the survey of the year 2001, Loop 1 and redundant survey connections among the various loops were removed from the survey and report. This resulted in a reduction of fieldwork with no loss of accuracy or precision. The redundant connections caused multiple elevations for the same stations. The differences were so slight that they were not used in elevation adjustments for the loops. The redundancy was used to spot gross errors in the field. After several years of surveying these loops it is evident that no gross errors occur that are not also evident in the loop closures.

Finally, Section 8 contains Table F, which summarizes the elevations for all surveys from 1987 through 2012, inclusive. A detailed listing of the 1986 through 1997 surveys is contained in the report, *WIPP Subsidence Monument Leveling Surveys 1986-1997*, DOE/WIPP 98-2293. A reference to the summary reports for each year after 1997 is listed in the reference section of this document.

## 2. Equipment

The observations were taken with the WILD NA3003 Electronic Digital Level (WIPP M&TE ID# DM0999) manufactured by Leica, and bar coded leveling staffs. The calibration for the DM0999 is valid from April 29, 2011, through April 29, 2013. The data were recorded electronically on the Leica GRM10 REC-Module, which plugs directly into the instrument. In addition to the electronic record, a written field log was maintained to record information that is not stored in the electronic record.

## 3. Office Processing

The data were downloaded from the GRM10 REC-Module to the survey group computer. The original raw data files were maintained intact while further processing was performed on a copy of the original raw data file.

Listing of the data and the adjustment of the loops was completed with the DIGILEV software (version 10.94d) from Leica Canada. The results, as summarized below, were extracted from the output of the DIGILEV software. A Software Quality Assurance Plan was written for the computer programs used in reducing the subsidence survey field notes. DIGILEV was tested, verified, and validated. The program was deemed acceptable and is now in the WIPP controlled software list.

#### **4. Methodology**

The weather conditions during the observations of the 2012 survey were generally mild with moderate temperatures and light to moderate breezes.

The elevations for the 2012 survey are computed from the adjusted observations based on the elevation of the subsidence monument, S-37 (3,423.874 feet). S-37, originally, was the WIPP monument furthest from the influence of the underground excavations. S-37 has been held fixed for all of the subsidence leveling surveys since 1993. The condition of the individual monuments was substantially the same as the previous subsidence survey.

In the 2004 survey, it was noted that the brass cap of monument PT-31 came loose making it unusable and monuments S-17 and S-18 no longer exist due to construction of the new salt storage/disposal pad.

As in previous years, the subsidence survey was divided into nine loops. Each loop generally takes one day to complete. This allows a loop to be completed in one surveying session and results in a lower probability of error.

For visual reference, Figure 1 is a graphic display of the individual loops, the total survey, and the relationship to the underground excavations.

## 5. General Summary of Results

Table A below describes the nine leveling loops that were measured to obtain the elevations of the subsidence monuments. The table contains the start date of the observations, a loop number, and the points that are contained within the loop.

**Table A. Description of 2012 Leveling Loops**

Start Date (DOY)	Loop	Points
September 7, 2012 (251)	2	D-419, S-37, C-419, S-38, S-51, D-419
September 12, 2012 (256)	3	C-419, B-419, A-419, Y-347, Z-418, Y-418, X-418, W-418, V-418, C-419
October 31, 2012 (305)	4	V-418, S-21, S-39, S-19, S-41, S-42, S-43, S-20, S-40, V-418

Table B summarizes the results of the leveling loops in terms of vertical closure and accuracy. The requirement for Second Order Class II loop closure accuracy was achieved in all cases.

**Table B. Summary of Distance and Accuracy for 2012 Leveling Loops**

Loop	Cumulative Distance (ft.)	Vertical Closure (ft.)	Accuracy (ft./ $\sqrt{\text{mile}}$ )	Allowable Accuracy (ft./ $\sqrt{\text{mile}}$ )
2	7,851.81	0.0004	0.000	0.040
3	13,002.69	0.0014	0.001	0.052
4	8,308.27	0.0061	0.005	0.041
5	13,254.61	0.0006	0.000	0.052
6	9,894.80	-0.0005	0.000	0.045
7	6,338.66	-0.0030	0.003	0.036
8	6,843.33	-0.0130	0.011	0.038
9	7,199.03	0.0062	0.005	0.039
10	6,897.16	0.0016	0.001	0.038

## 5.1 Accuracy Summary by Loop

Table C displays a detailed summary of the observations in the leveling loops for the 2012 survey. All results are displayed in feet. The information in the table for each loop includes:

Between each benchmark in the loop:

- The distance leveled between benchmarks along the loop.
- The number of instrument setups between each of the benchmarks.
- The difference in adjusted elevation from each benchmark to the next.

For each loop as a whole:

- The cumulative, or total, distance of each loop.
- The vertical closure of the loop.
- The accuracy of leveling.
- Allowable accuracy for each loop.

The accuracy of the leveling is given in terms of feet times the square root of the length of the loop in miles. The actual accuracy of leveling is computed in the DIGILEV software, and is based on the actual vertical closure of the loop. The maximum allowable accuracy is based on the allowable accuracy of a loop as stated in the FGCS specification for digital leveling. The FGCS specification for Second Order Class II loop closure permits a maximum of  $8\text{mm}\sqrt{\text{Km}}$  (8mm times the square root of the length of the loop in Km). This converts to  $0.033\text{ ft}\sqrt{\text{mile}}$  (0.033 feet times the square root of the length of the loop in miles) when stated in the English System. All values indicated in this summary are expressed in feet.

Inspection of the following tables displays that in every case the actual accuracy is well below the maximum allowable accuracy for each loop. The column in each table that is labeled "Difference" is the vertical difference from one point to the next. It is important to note that the vertical difference figures are calculated from the adjusted point elevations and because of rounding, the algebraic sum of the column may not be zero.

## 7. Adjusted Elevations (2012)

Table E displays the adjusted elevations for the subsidence monuments and the NGS points contained within the 2012 survey. These elevations are normalized to the monument, S-37. All elevations are displayed in feet and are within the WIPP local coordinate system.

**Table E. 2011 Adjusted Elevations**

Point	Elevation (ft.)	Point	Elevation (ft.)

## 8. Comparison of Elevations\*

Table F compares the elevations from all of the subsidence leveling surveys from 1987 through 2012. All elevations are displayed in feet.

**Table F. Comparison of Elevations 1987-2012**

	S-01	S-02	S-03	S-09	S-10	S-11	S-12	S-13	S-14
1987	3,409.738	3,408.219	3,408.914	3,394.056	3,402.466	3,406.437	3,411.790	3,422.428	3,411.500

\* The 1986 elevations that appear in all reports prior to the 2001 report are from a report filed by Jerry Williams (3/89), Geoscience Department. Those elevations were, in turn, taken from the 1987 data, rounded to two decimal places and referenced as 1986. When this was discovered it was decided to remove the 1986 information from all subsequent reports.
